# SKIN PACKAGING MACHINE

## Product Details

A skin packing machine is a type of packaging equipment used to encase a product or item in a clear plastic film, creating a tight and transparent "skin" around it. This packaging method is also known as "skin packaging" or "skin packaging technology." The process involves placing the product on a backing material, covering it with a plastic film, and then applying heat to create a vacuum, causing the film to conform tightly to the contours of the product. This method provides a secure and visually appealing packaging solution.

### Silent Features: -

Backing Material | Plastic Film | Heating Elements | Vacuum System | Cooling Section | Cutting Mechanism | Adjustable Settings | Conveyor System

### Benefits: -

Secure Packaging | Visibility | Customization | Product Protection | Marketing Appeal

## SPECIFICATIONS

Voltage	420/ 3 Phase
Total Power (KW)	7.5
Packaging Area (mm)	390 x 540
Packing Speed (pcs/h)	50-60
Packing Material	PVC/PE
Film Width (mm)	450
External Dimension	1500 x 600 x 1350 mm
Net Weight (Kg)	135 kg
